the redshift moves every photon to lower E; what crosses an edge:
lost
LW → PE
dropped
I_E (arbitrary units)
below 6 eV:
not transported
$E_{\mathrm{lo},b}\, I_E(E_{\mathrm{lo},b})$:
flux out through
the lower edge
PE band
$I_{\mathrm{PE}} = \int_{\mathrm{PE}} I_E\, dE$
LW band
I_{LW}
ionising:
HII channel
6.0
11.2
13.6
photon energy E [eV]
