(a) merge: one origin per slot
$e_s = 1$
$e_s = 0.25$
mean origin $\boldsymbol{o}_k$
$e_s = 0.5$
j
$\boldsymbol{n}_k$
origins whose light
lands in one slot of j
$d_k = 3.95 \leq$ mean distance 4.08
(b) two beams at 60°
part of beam 2
in the slot of beam 1
beam 1
j
slot of
beam 1
beam 2
lobes: angular spread of each
beam after the hop cone
